

QUALITY POLICY

HONNES HEALTH,

Keeping the human factor and health at the forefront, ensuring that the production of safe products in line with the measurable and acceptable levels of quality parameters and the reflection of customer expectations on our products within the scope of continuous improvement as a principle,

Our aim is to develop and present superior brands with excellent quality in order to gain the satisfaction, trust and loyalty of our customers and stakeholders, to meet all legal requirements, to fulfill customer requests and to meet different needs and expectations. It is to add value on top of value with a problem-solving-oriented management approach by constantly raising our standards with continuous improvements, corrective and preventive actions. To strengthen the understanding of team building on business and human factor as cost-benefit,

To define the principles that all employees in Honnes Health have to comply with in order to reach its customers by creating a transportation and distribution network all over the world by producing reliable products in the cosmetics industry in line with the understanding of product safety management, and to provide products and brands of high standards,

To provide our customers with high quality, environmentally friendly and innovative products, produced in environments that comply with the regulations regarding Quality, Environment, Occupational Health and Safety, Product Requirements, Product Safety, GMP and Reach, and environmental and quality management system conditions, with a perspective of continuous improvement,

To reduce the use of resources related to energy efficiency, energy use and energy consumption and to carry out the necessary activities for the efficient use of natural resources,

To enable and contribute to the use and development of innovative technologies and methods that will contribute to sustainable development,

Honnes Health is committed to its customers to comply with and maintain our quality and product safety system with national and international standards, the requirements of the age, technological developments and the demands and expectations of customers.
